

All Mannington carpet products are fluorine free. Mannington's current production uses stain & soil treatment – Duratech by Invista – that does not contain fluorine.

Duratech is not a fluorocarbon or topical treatment. It is an inherent feature that is not water soluble and will drastically reduce life-cycle maintenance costs of our carpets. All acid type spills can be removed from the carpet with tap water for as long as the carpet is installed without the use of chemicals and detergents.

In addition, all of Mannington's carpets are certified under the Carpet & Rug Institute's Green Label Plus testing program, demonstrating superior indoor air quality and all of Mannington's carpet adhesives have negligible VOC levels. All carpets and adhesives qualify for LEED Credits for Indoor Environmental Quality and meet the VOC limits currently established by the South Coast Air Quality Management District Rule 1168, CDPH Standard Method V1.1 / Specification CA01350, and the California Green Building Standards Code. Further, the adhesives do not contain ingredients listed under California Proposition 65 hazardous chemicals listing.

Mannington has also completed product specific EPDs for multiple backing systems, including Infinity, Infinity RE, and rEvolve, and Integra HP broadloom backing; we have also completed product HPDs for our rEvolve, Infinity, Infinity RE, and Integra HP backing systems. Our rEvolve modular backing is also listed with Declare™. See [www.mannington.com/commercial](http://www.mannington.com/commercial) or 1-800-241-2262 for more information.
